Beth Toldo
toldob@city.windsor.on.ca
Council Agenda Coordinator
Windsor Ontario Canada

Dear Ms. Toldo:

Donna Mayne has requested that I write a letter to present to the Windsor City Councilors regarding the Safe Water Drinking Act clause that comes into effect on January 2013.

I am a licensed and practicing dentist in Tulsa Oklahoma. I have been practicing general dentistry for 40 years with the last 20 years being focused on Holistic and Biological dentistry.

I realize that at your Windsor fluoride meetings those testifying dentists and medical doctors are attempting to convince you that they are "fluoride experts" simply because they have successfully graduated from a dental or medical school. I also graduated from dental school and in school was taught that same dogma that "fluoridated drinking water is safe, beneficial and of value" and that "consuming fluoridated drinking water will reduce tooth decay," thus I am just as well qualified to be a "fluoride expert" as all those DDS's and MD's who were also educated exactly as I was.

However, many years ago, I discovered that there was a ton of fluoride information that was **intentionally** not included in any dentist or medical doctors' formal dental education. As I continued to study this **intentionally omitted** material I soon realized that all of us DDS's and MD's had a serious deficiency in our formal fluoride education and that in addition we were also given a significant amount of **misinformation**.

I am already automatically considered to be a "fluoride expert" since I graduated from an American Dental Association accredited dental school and I am a DDS. In addition, after graduation I continued to study this drinking water fluoride issue and not to sound arrogant but I do know much more about this fluoridated drinking water issue than the majority of dentist or medical doctors out there. Those dentist appearing before you who are attempting to convince you they are "fluoride experts" should actually be considered to be "educationally deficient pseudo fluoride experts."

These pseudo expert dentist and medical doctors who promote the fluoridation of the public drinking water have been duped by the "authorities" and I pray that the Windsor Council members don't allow themselves to be likewise duped by the already duped dentist and medical doctors.

I could give you a full accounting of this fluoride fraud here in this letter but it would be lengthy and I have already written in full detail and will refer you to my educational web site www.DentalConfessions.com where you can read the full story. When you go to that web site, click on the "Fluoride Fraud" section and there you will find a short paper and a more lengthy and detailed section. You will also find a section on Professional Ethics site which explains how dentists (and medical doctors) who promote water fluoridation are in violation of their professional ethics. My web site clearly documents how the United States Public Health Service and the American Dental Association's "classical fluoride studies" were both scripted and manipulated and were not done following the protocol of the Scientific Method. When accurately studied it is easy to document that fluoridated drinking water does **NOT** reduce tooth decay rates and **does** in fact **contribute** to a long list of health problems.

To test the knowledge of these "fluoride expert" dentist and medical doctors I challenge the City of Windsor Council members to ask those "fluoride experts" explain in detail how fluoridated drinking water causes dental fluorosis. (By the way, dental fluorosis is the first visible symptom of chronic fluoride poisoning.) When you read the Fluoride Fraud section of my web site you will find many other questions you could ask these "fluoride experts" to stump them and to documents their **lack** of expertise.

Ask those "fluoride expert" dentists why **NONE** of the US Public Health Services (USPHS) "classical" water fluoride studies were done following the Scientific Method. **In** all these "classical studies" the same children were **NOT** followed from year to year, the drinking water sources changed and were not consistent, nutrition or oral hygiene care was not considered among other variables. These numerous variables totally disqualify the "classical" USPHS studies used to promote drinking water fluoridation.

There is a radical difference between the chemical calcium fluoride and hydrofluosilicic acid. Hydrofluosilicic acid is a highly reactive and very toxic industrial waste solution that used for drinking water fluoridation. Water fluoridation to is just a way to inexpensively dispose of this toxic industrial waste fluoride chemical. Calcium fluoride is a chemically stable compound that is **very expensive** and is not a waste product to be disposed of. Calcium fluoride is **NOT** the chemical being used to fluoridate public drinking water. The only purpose for drinking water fluoridation is to be able to dispose of a very toxic waste industrial hydrofluosilicic chemical as inexpensively as possible.

Understand that in dental school there is **NOT** any course called Fluoride 101. As dental students we were only taught how to mix and topically apply the fluoride chemical. We were taught absolutely **nothing** about fluoridated drinking water but were only

indoctrinated with the dogma that if anyone expressed any opposition to the ingestion of fluoridated drinking water they were to be referred to as quacks, or anti-science or some other derogatory name and the public was considered to be not knowledgeable and any knowledgeable member of the public should be cornered and insulted. That extremely minimal training is what qualified us dentist to be called a "fluoride expert."

When a dental student graduates from dental school we get a diploma as well as a badge to wear that certifies us as an official "Fluoride Expert"... even though that graduating dentist (or medical doctor) doesn't know squat about the fluoride chemical(s) used for drinking water fluoridation.

When any fluoride educationally deficient dentist or medical doctor supports the addition of those toxic fluoride chemicals to the public drinking water, they are only endorsing this either due to their lack of awareness of their duping or because they want to be politically correct in the eyes of the rest of the educationally deficient dental community.

I highly encourage all the Windsor Councilors to read all sections of the "Fluoride Fraud" section of my web site, especially the Ethics section, and then require all those "fluoride experts" to also read it and then to reply. Please use my web site in any way you desire. I created this educational web site for you and others who desire to end this fluoride fraud.

Sincerely,

Jim Maxey DDS
